

Verdasys and cirosec Announce Strategic Partnership

cirosec to provide point of use security solutions in Germany

Waltham, MA — January 30, 2006— Verdasys, Inc., developers of Digital Guardian, the world's most comprehensive global data security platform, and cirosec GmbH of Heilbronn, Germany today announced a strategic partnership for the sale of Digital Guardian enabled solutions in Germany and Switzerland.

As an experienced IT-security consulting and integration firm employing well respected security experts, cirosec provides services for developing complete security solutions that go far beyond classical perimeter protection mechanisms such as firewalls and virus protection. Cirosec is renowned in the German marketplace for its extensive knowledge of the security space and its ability to select products which "best fit" customer requirements for data protection. Under this announced partnership, cirosec will introduce new services and security solutions that will include the sale and integration of Verdasys' Digital Guardian platform, along with extensions to its product line.

"We look forward to working with cirosec in delivering the most comprehensive data security solutions in the world to the German market," said Stefan Gieseler, General Manager Europe for Verdasys. "We also welcome cirosec's ability to quickly and dramatically increase brand recognition of Digital Guardian in this market based on their long standing reputation with their existing customers. Together, we will be providing the most economically compelling approach for the protection of information and compliance with data privacy and governance requirements in this region."

Germany's industrial giants require that effective security solutions be in place for protecting intellectual property, as they strive to maintain their current leadership positions in today's global economy. Digital Guardian's ability to comprehensively monitor and control information at the point of use, on desktops, laptops and servers, and cost-effectively audit and protect critical information assets is proving to be a "must have" solution for these organizations.

"We look forward to leveraging our strong experience in information security to support Verdasys in the German market," said Stefan Strobel, CEO of cirosec. "Verdasys' unique Digital Guardian platform and their extended solutions will be of great benefit to the large enterprises in Germany who are eager to implement the best protection available for their data".
