

## **Verdasys Announces Partnership with Tokyo Electron Device K.K. to Deliver Application Logging for Compliance with Japan's Security Industry**

**Waltham, MA – November 30 , 2006** - Verdasys, Inc., the leader in Business Process Integrity solutions for information risk management, announced today that it has entered into a partnership with Tokyo Electron Device K.K. (TEL), which exclusively distributes SenSage's large volume logging management product "SenSage Enterprise Security Analytics" in Japan. TEL chose Verdasys to strengthen their security platform solution in order to meet internal business process requirements including Japan SOX.

Verdasys recently signed an MOU (Memorandum of Understanding) with TEL, which validated the alliance and the collaboration of security solutions between SenSage's product and Verdasys' Digital Guardian solution to provide effective enterprise information risk management. Verdasys' Japan affiliate provides TEL with sales and technical support.

With recent technological advances, the misuse and loss of essential enterprise information and customer data significantly impacts enterprise business management. To remain in compliance with Japanese regulations such as the Personal Information Protection Act (PIPA) and Japanese SOX, the ability to audit, control and prevent data misuse and data loss must be implemented into global enterprise applications. By integrating the Digital Guardian solution, Verdasys and TEL can maintain effective business enterprise management.

TEL uses a central server console to deploy and monitor Digital Guardian agents throughout the organization. Through the agents, Digital Guardian logs user data transactions and applies pre-defined rules to ensure that enterprise applications, including SenSage's logging management solution, are used properly.

"TEL is a well known technology leader in Japan and we are thrilled to partner with them to strengthen their security platform," said Seth Birnbaum, CEO of Verdasys. "Our Application Logging solution allows virtually anyone with older legacy applications to be able to place a protective layer around their data, without the need to undertake a large software development project and quickly meet compliance regulations," he added.

### **SenSage Features:**

"SenSage Enterprise Security Analytics" is a logging management solution that maintains large volumes of log data generated by OS, applications and network devices in tera byte unit, and provides fast search and detailed analyzed log data.

- Tera byte log data are stored in a highly compressed format using a proprietary data compression algorithm
- Proprietary large log search and analysis engine with a SQL interface
- Standard supporting of more than 180 event sources
- More than 180 output templates for SOX and HIPAA compliance

### **About Tokyo Electron Device K.K.**

Tokyo Electron Device K.K. is the technological leader in providing semi-conductors, TEL's private brand products, business solutions, and developing customer specified products. TEL is the first company to introduce American semiconductor production equipment and integrated circuit (IC) testers to Japan. Since then, the company has grown to encompass nearly 80 offices in 16 countries that engineer, manufacture,

sell, and service wafer-processing or semiconductor production equipment (SPE), as well as flat panel display (FPD) equipment. As the world market share leader in several product lines, TEL plays a vital role in the evolving global semiconductor industry. Additionally, TEL provides customers with superior electronic components and computer networks from around the world.
