

## **DIGITAL GUARDIAN**

### **Enterprise Data Discovery**

With a majority of large organizations having no real-time process or systems in place to find, classify or track sensitive data, and with the low cost of data storage, it is no wonder that large amounts of sensitive data are proliferating across local drives and file servers at a majority of large companies. Critical and sensitive information including intellectual property, privacy data and corporate secrets have made their way across computers and servers often located remotely and even globally. IT departments are struggling to meet corporate mandates to find and catalog this information to protect company brand and competitive advantage as well as meet compliance requirements to regulations including; SOX, GLB, HIPAA, PCI and more.

#### **Digital Guardian Data Discovery**

Digital Guardian's comprehensive discovery, monitoring and control capabilities provide enterprise clients with a fully integrated service to search for, identify, classify and report on the presence of sensitive information residing on servers, desktops and laptops across the enterprise. Digital Guardian, through its integrated framework and multi-function agent is the only solution that delivers a comprehensive and manageable data discovery capability that includes:

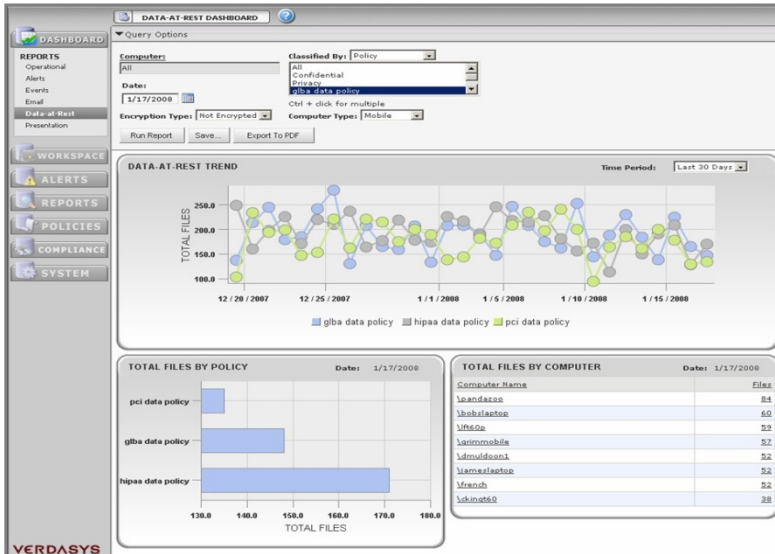

#### **INVENTORY & CLASSIFY SENSITIVE DATA**

- Initial data scanning and re-scanning is easily managed from a central server
- Scans can run in real-time or in background modes
- Scanning runs across all endpoints including laptops, desktops and servers
- Scanning is flexibly defined by location, machine, group and individual
- Scan analysis includes similarity, keyword, dictionary and pattern
- Data discovery analysis includes 300 file types in over 90 languages
- Scanning results are collected, aggregated and detailed in clear and concise reports
- Report types include data discovery, classification and usage

#### **Verdasys Enterprise Data Discovery Service**

Verdasys offers a turnkey data discovery service that combines the Digital Guardian Solution's capabilities with our experienced Enterprise Data Discovery Service team; delivers a turnkey solution to meet all requirements. Our Enterprise Data Discovery Service eliminates the guess work around what types of data are at risk and where that data is located. Working with an experienced team of Verdasys consultants, organizations identify the types of data and the file shares or end point locations (laptops/desktops) that need to be scanned. Verdasys engineers monitor the status of the scan throughout the project and provide a detailed report summarizing the systems that were scanned and the quantity of sensitive data found in each location. Within 30 days, organizations are able to report on exposed data and begin corrective measures to reduce risk.

## DATA DISCOVERY SERVICE

- Quickly identify and inventory sensitive information residing on servers, desktops and laptops
- Execute data discovery projects without having to “ship” hardware back to central IT
- Comprehensive visibility into how sensitive data is being used across devices, applications and all channels of communication
- Detailed reporting on regulated or sensitive information that is at risk including intellectual property and privacy data
- World-class support provided by the experienced Verdasys consultant team
- Enabling IT auditors to focus in on where the material risks were discovered

## ENTERPRISE DATA DISCOVERY TECHNOLOGY

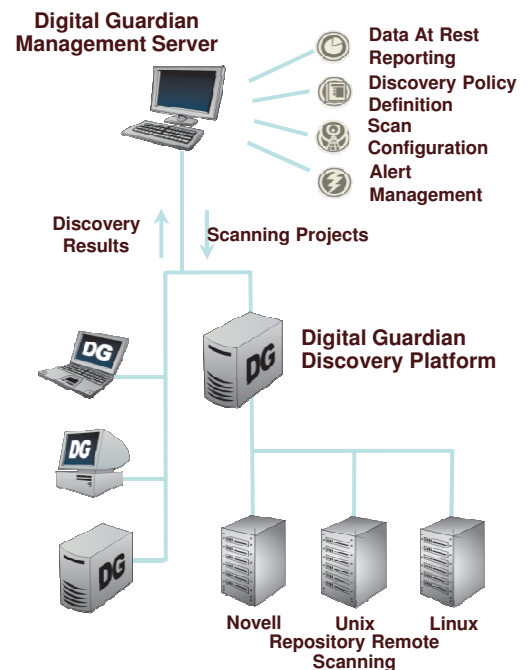

Through the powerful technology of Digital Guardian, the content of files are examined for critical keywords and patterns across more than 300 file types. Flexible and customizable entity and keyword matching, as well as multi-lingual capabilities allow for accurate results. Digital Guardian technology utilizes existing pre-built patterns, checksums, validated number ranges and other criteria to reduce the amount of false returns, ultimately assuring that highly sensitive data is accurately identified and protected.

## DIGITAL GUARDIAN ENTERPRISE INFORMATION PROTECTION PLATFORM

Digital Guardian, through its integrated framework and multi-function agent, is the only solution that delivers:

- Enterprise-wide visibility into sensitive data location and use
- Policy enforcement that leverages not only identity and activity, but also data classification, context, and content analysis
- Risk appropriate responses to user activities including warnings, blocks and policy driven automated file and email encryption

Digital Guardian allows your business to put sensitive information to work while ensuring its usage is governed, controlled and audited

Verdasys provides Enterprise Information Protections (EIP) solutions that secure proprietary and sensitive data and the integrity of business processes essential for Global 2000 companies to successfully compete in today’s highly collaborative and mobile environments. Verdasys customers are the global leaders in financial services, insurance, technology, manufacturing, and healthcare industries around the world. Companies serious about information protection choose Verdasys.

Verdasys headquarters is located in Waltham, MA. With offices in London, Munich, Rome, Madrid, Athens, Tel Aviv, Tokyo, Osaka, Taipei, Singapore and Shanghai.
