

# Convergys Uses Digital Guardian to ensure Effective Data Protection

**Gautam** | Nov 19 2006

With instances of data theft occurring in BPO companies worldwide, **Convergys** has decided that in order to control this it would be implementing Digital Guardian across its operations. The outsourcing company would be deploying Digital Guardian for protecting data and managing information risk throughout its operations in U.S and overseas in order to improve the standards of customer data protection.

Digital Guardian from Verdasys is an effective solution for protection of data and tracking critical information worldwide. It ensures effective monitoring and controlling of the data. Data actions of users are logged and pre defined rules are applied in order to ensure that applications and data is being used properly.

It offers best protection and at the same time minimizes business process disruptions.
